this book focuses on deep learning based methods for hyperspectral image hsi analysis unsupervised spectral spatial adaptive band noise factor based formulation is devised for hsi noise detection and band categorization the method to characterize the bands along with the noise estimation of hsis will benefit subsequent remote sensing techniques significantly this book develops on two fronts on the one hand it is aimed at domain professionals who want to have an updated overview of how hyperspectral acquisition techniques can combine with deep learning architectures to solve specific tasks in different application fields on the other hand the authors want to target the machine learning and computer vision experts by giving them a picture of how deep learning technologies are applied to hyperspectral data from a multidisciplinary perspective the presence of these two viewpoints and the inclusion of application fields of remote sensing by deep learning are the original contributions of this review which also highlights some potentialities and critical issues related to the observed development trends

a true introductory text for learning the spectroscopic techniques of nuclear magnetic resonance infrared ultraviolet and mass spectrometry it can be used in a stand alone spectroscopy course or as a supplement to the sophomore level organic chemistry course

this book deals with hyperspectral image classification using graph neural network methods focusing on classification model designing graph information dissemination and graph construction in the book various graph neural network based classifiers have been proposed for hyperspectral image classification to improve the classification accuracy this book has promoted the application of graph neural network in hyperspectral image classification providing reference for remote sensing image processing it will be a useful reference for researchers in remote sensing image processing and image neural network design

reviews in mineralogy geochemistry ring volumes contain concise advances in theoretical and or applied mineralogy crystallography petrology and geochemistry

the purpose of hadron 05 was to discuss recent developments in hadron spectroscopy new hadrons have been discovered in the past few years these states do not quite fit into the traditional quark model classification scheme of hadrons there has also been a remarkable improvement in the understanding of heavy quark bound systems or heavy quarkonia as well as the so called scalar mesons topics covered include baryons exotics and hadron structure
